

JointPoint®

What is the **JointPoint** ® system by **ezarri**?

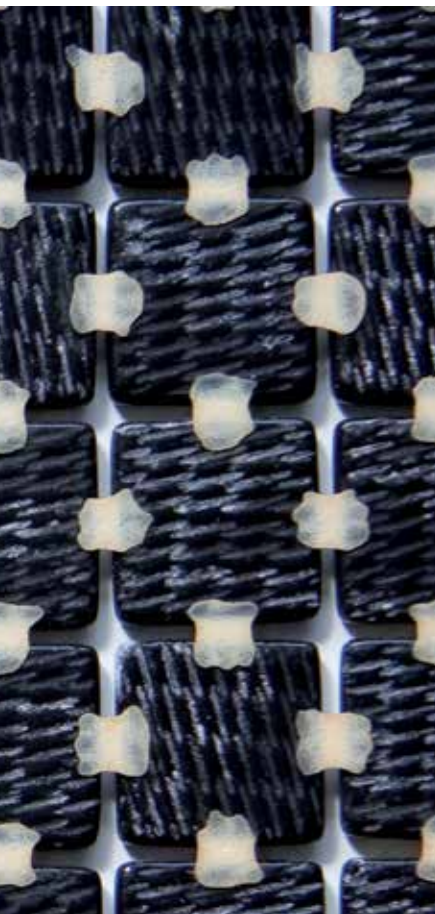

This is a very technologically advanced system solely developed by **ezarri**, guaranteeing perfect and uniform mosaic tiling.

Advantages of the **JointPoint**® system

1. Maximum grip surface

With the **JointPoint**® system 92% of the mosaic's surface is free for applying the glue, obtaining the most gripping surface and therefore, longer durability.

2. Easy to install. Save 25% of your time

Unlike the paper-faced mosaic systems, with **JointPoint**®, once the mosaic is placed, you don't have to waste your time removing paper or cleaning glue remains.

Also, by using our **JointPoint**® system, you avoid tiles from loosening up like in the paper removal process.

With **JointPoint**® you will finish your projects 25% faster

Advantages of the **JointPoint**® system

3. Excellent finishes

The **JointPoint**® system's finishes are excellent, as there is practically no chance of making mistakes during the installation, since it is easy to check visually, easy to install, and because of the **outstanding shine of the final results.**

4. Moisture proof

Since the **JointPoint**® system is moisture proof, there are no problems with dilations or loosening the panel up, unlike with the paper-faced mosaic tile system.

The mesh dilates and contracts with humidity, and this is how the joints may become misaligned, resulting in many readjustments during installation.

The paper-faced mosaic tile system is very sensitive to humidity, so if it gets wet, the material becomes useless and must be all thrown away.

With the **JointPoint**® system you are fully assured that the material will remain unchanged during storage.

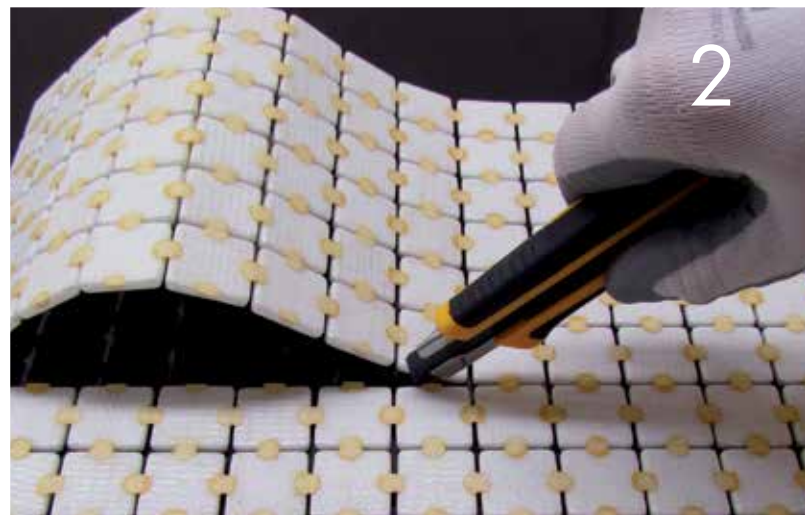

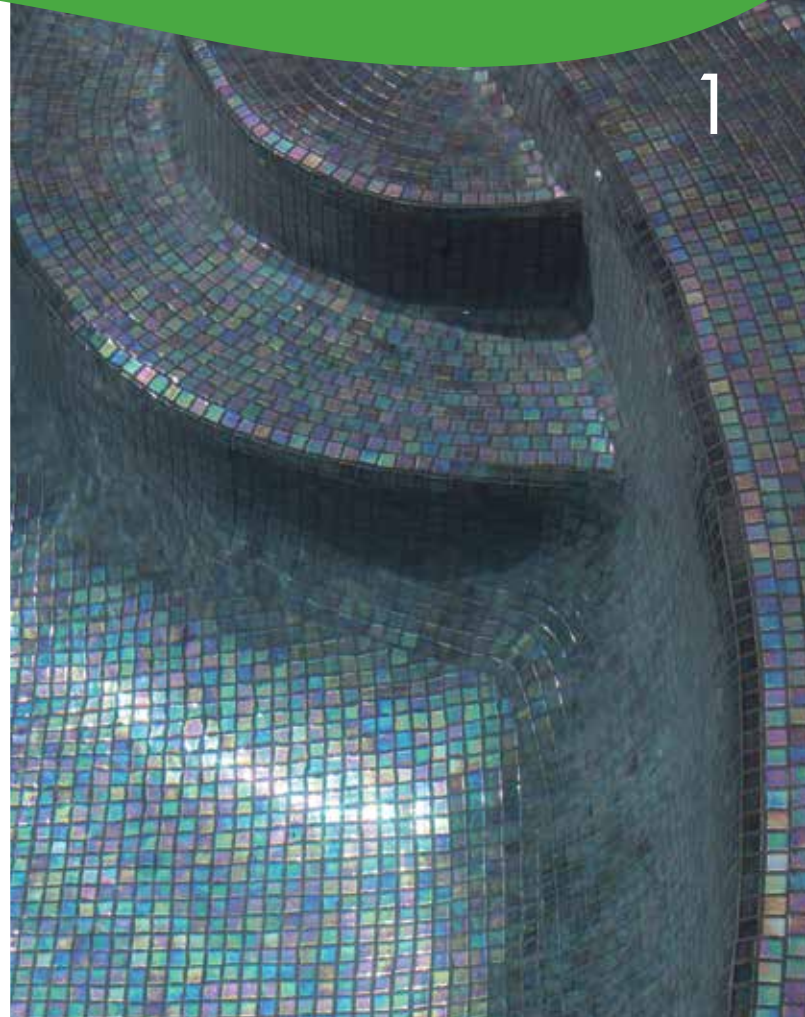

Advantages of the **JointPoint**® system

5. Exclusive composition of the **JointPoint**® adhesive

The **JointPoint**® system's adhesive is based on technology developed exclusively by **ezarri**. It offers ideal malleability and the necessary rigidity to ensure a perfect fixing of the mosaics. It adapts to all surface types and allows for easy handling of the panel.

1. Flexible. Adapts to all surface types.
2. Easy to cut.

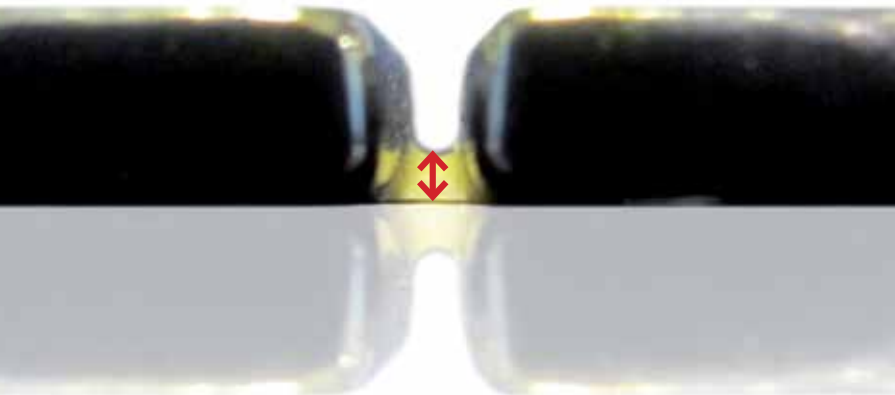

6. The smallest, most uniform and controlled point

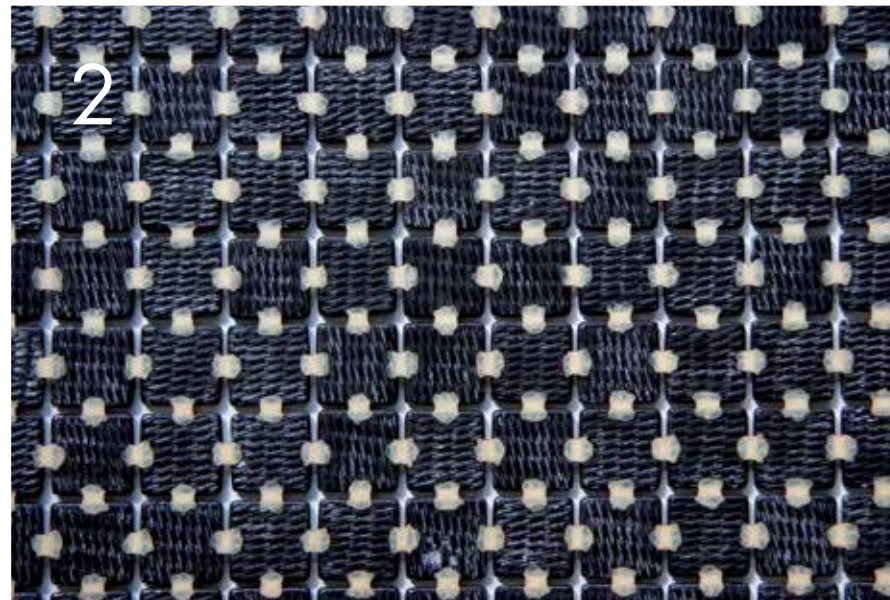

With the **JointPoint**® system, **ezarri** has obtained complete control of the glue point size and its placement, being the smallest, most uniform and controlled on the market.

1. Thinnest point.
2. Uniform and controlled point.

_____ D E C O _____

People aspire to making their homes unique spaces.

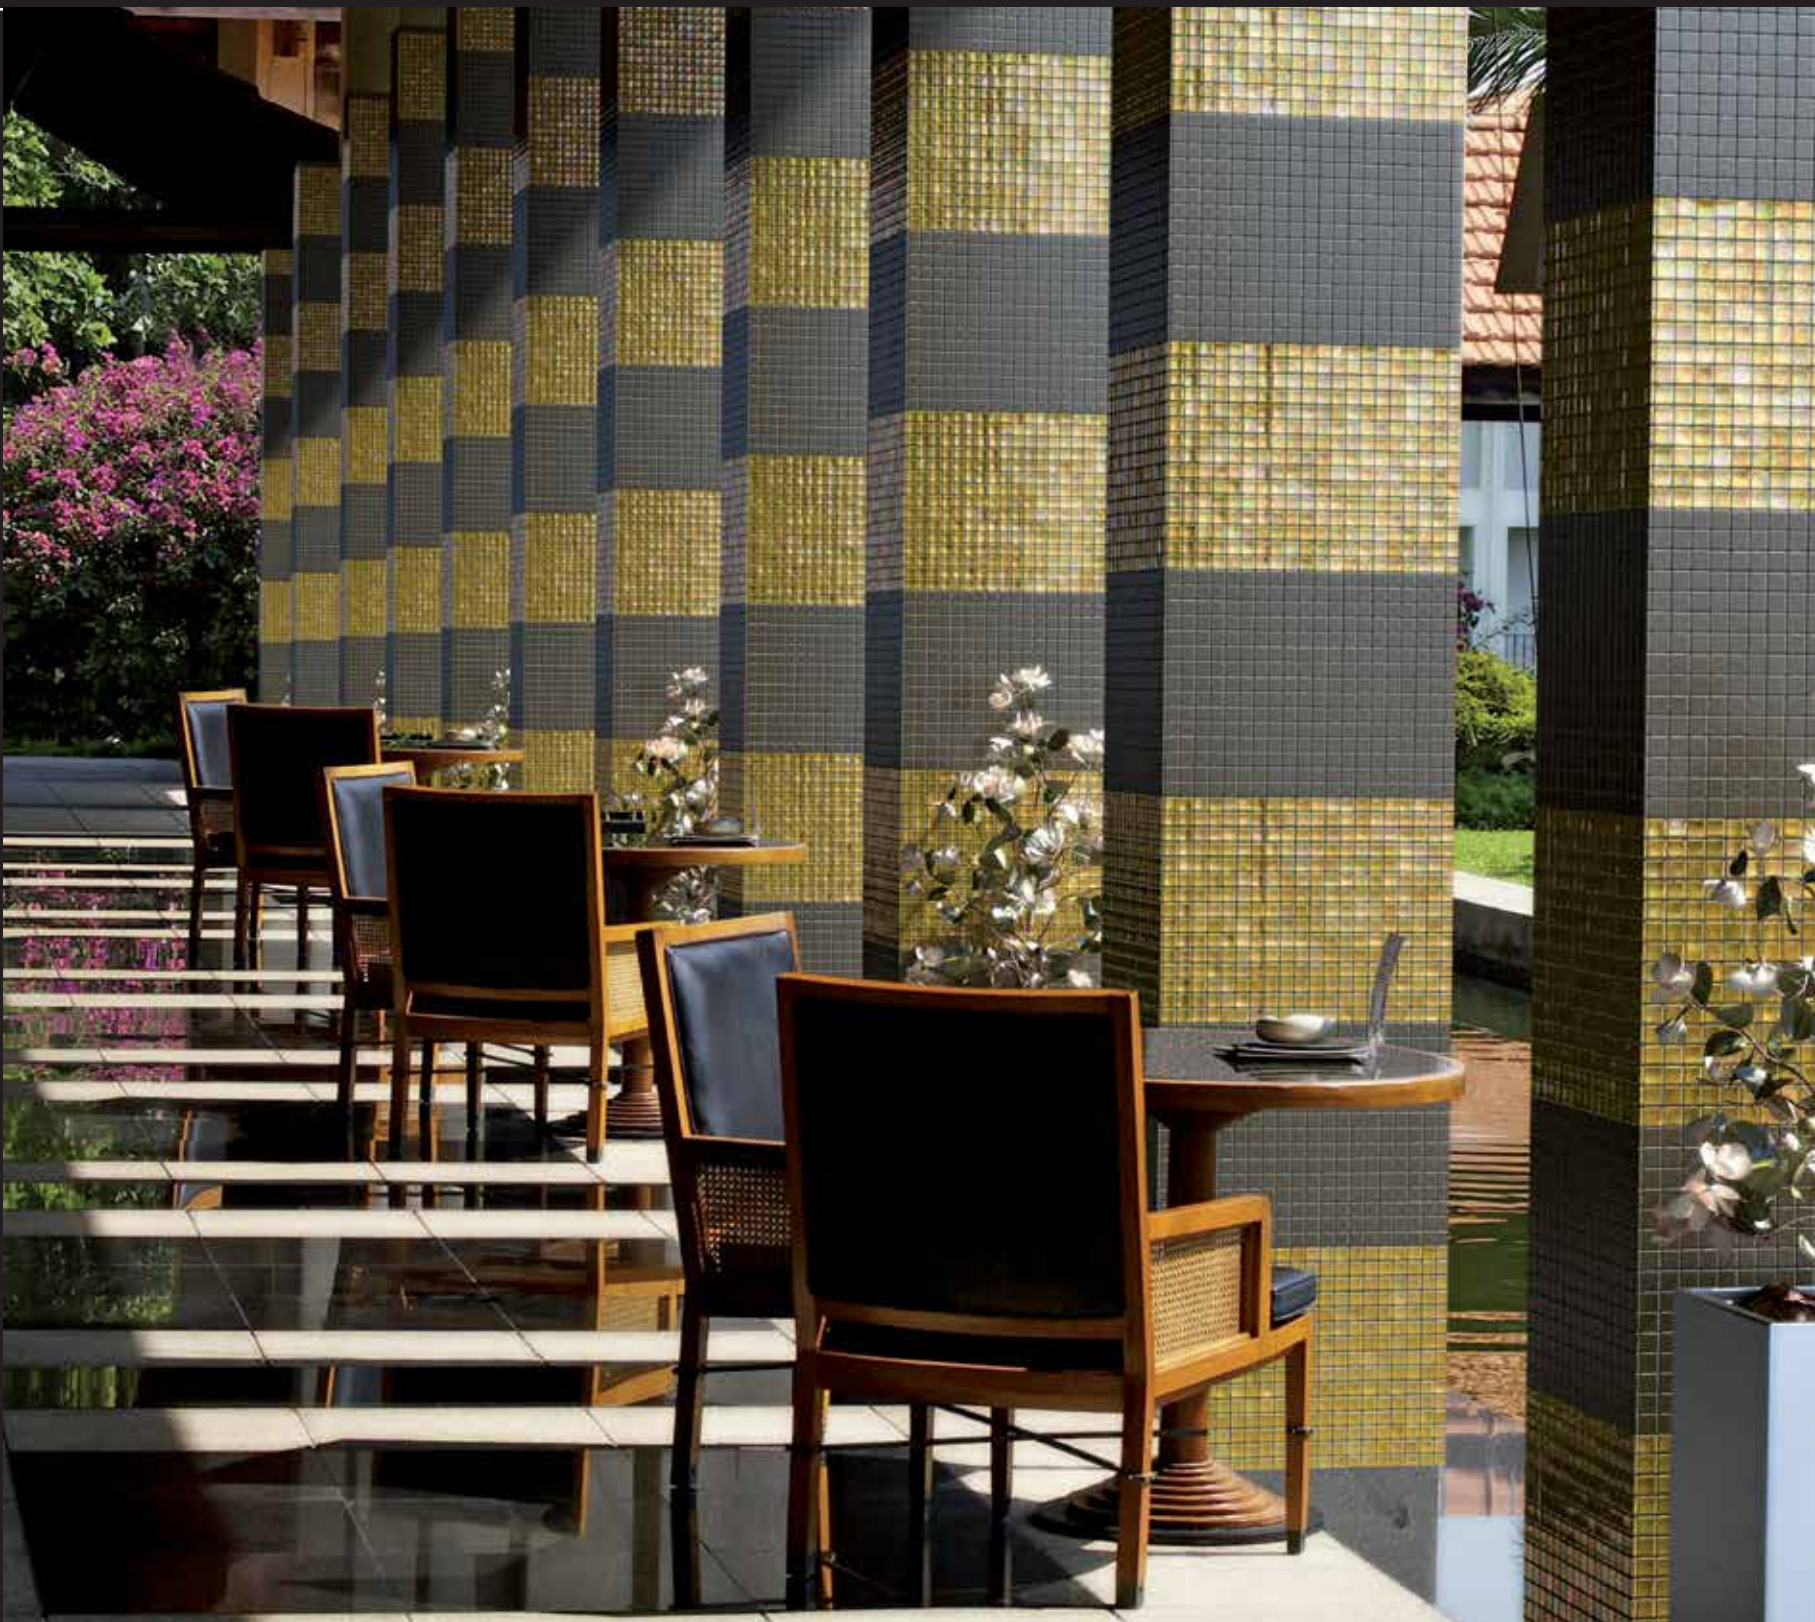

Personal places where small details go hand-in-hand with functionality.
The exquisite with daily use. Places that make us proud, that represent
who we are, what we feel and what we desire...

This is also true of the new glass mosaics from **ezarri** DECO.
Coverings and decorations that reflect your creativity and imagination.

Elegant décors, exclusive designs, every proposal as unique. Finishes and
tones that transmit perfection, harmony and sophistication in classic and
modern rooms alike, with its wide range of colours and finishes.

Spaces overflowing with splendour

Our mosaics, in comparison to other wall or floor coverings, have the advantage of harmonising the material's shine, variety of colours and textures with the ability to adapt to all surfaces, including curves.

It is also such a hygienic material that it can be used in swimming pools, spas, gyms, wellness centres and in addition offers no water absorption, making it an ideal material for wet environments.

In addition, **ezarri**'s mosaic offers optimal durability, ease of clean, safety and 100% of the glass used as the raw material in our production process is recycled glass.

Distinction,
relaxation,
seduction
